Scope of Work

for the

Rehabilitation of

Al Madina Hospital
Nyala, South Darfur

Project Introduction:

- Total Area: 15,500 sqm
- Divided in 3 blocks:
    1. Outpatient Block
    2. Inpatient Block
    3. Surgical Block (OT Complex)
- The hospital was originally built for Pediatrics, Gynecology and Obstetrics but now we want to upgrade to multi specialty.

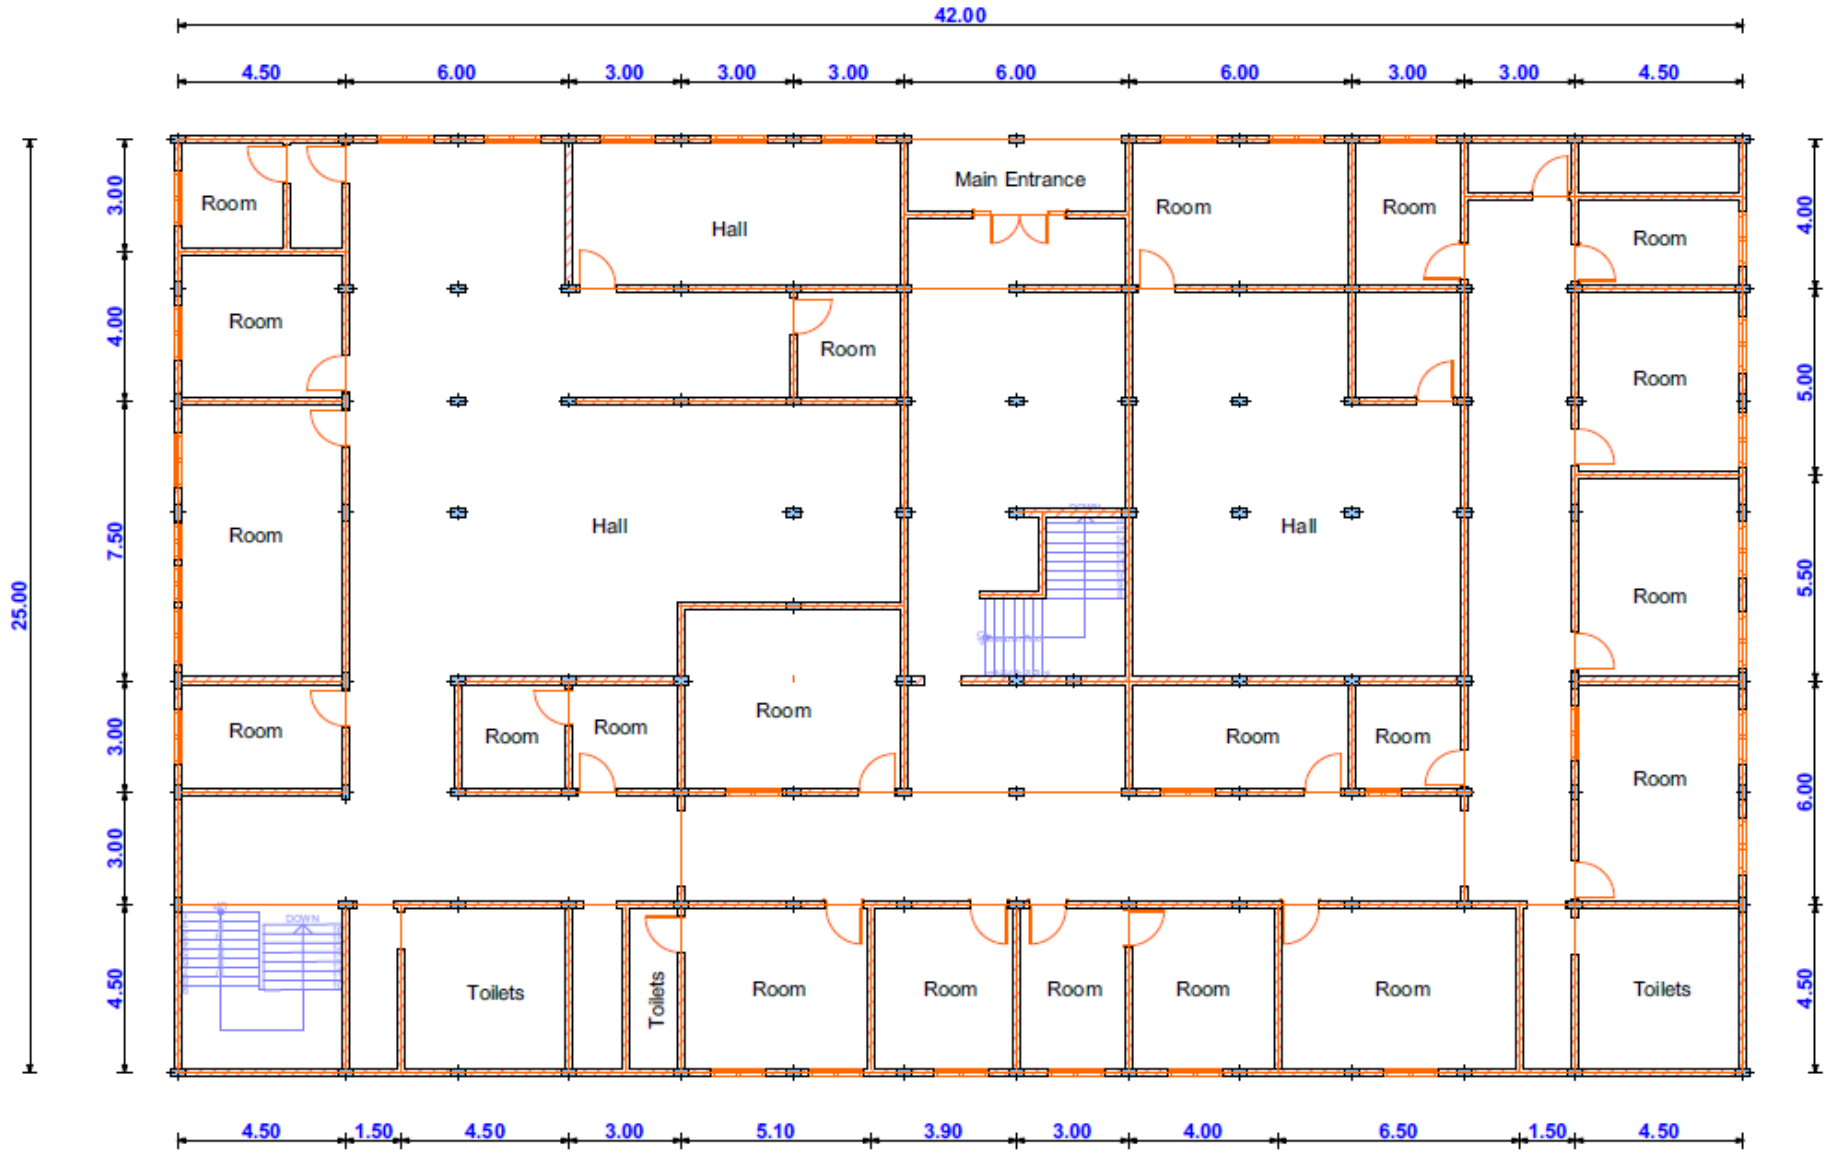

Current State:

- The Grey Structure of the buildings is ready

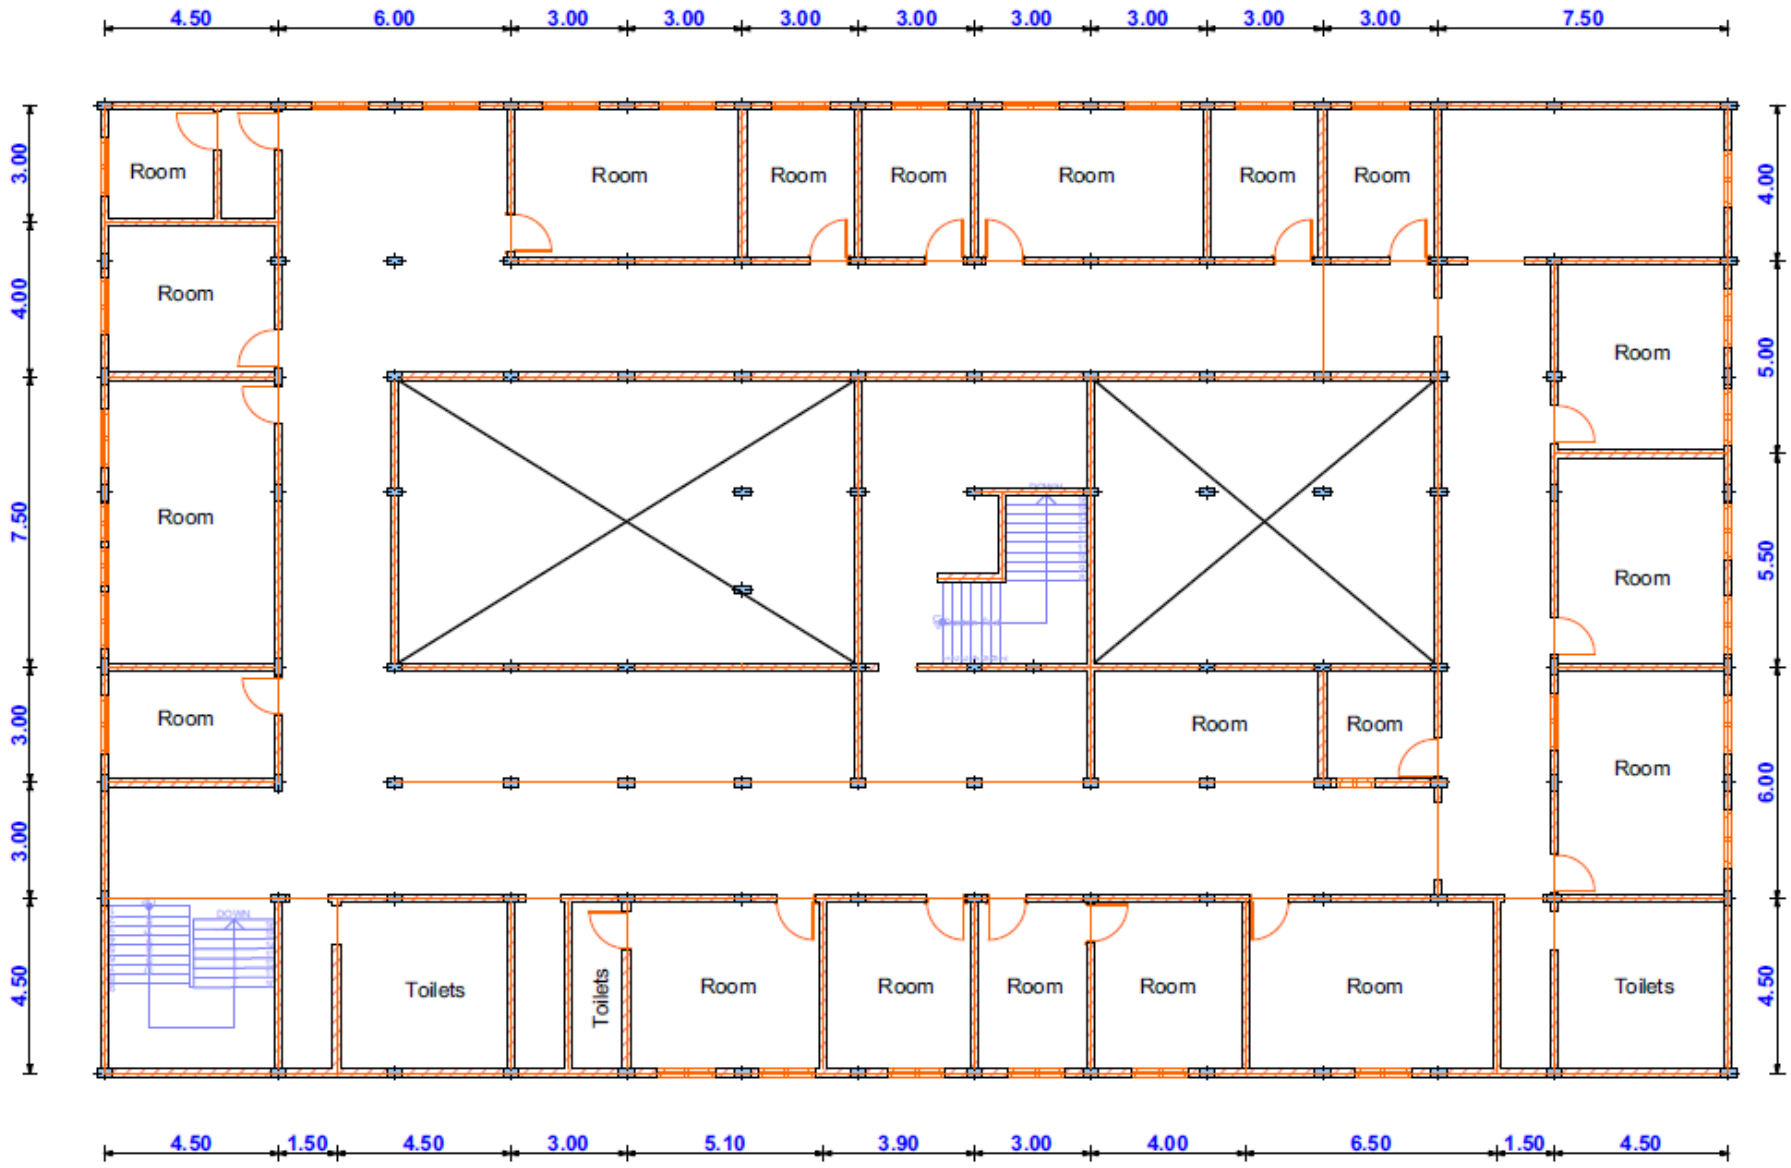

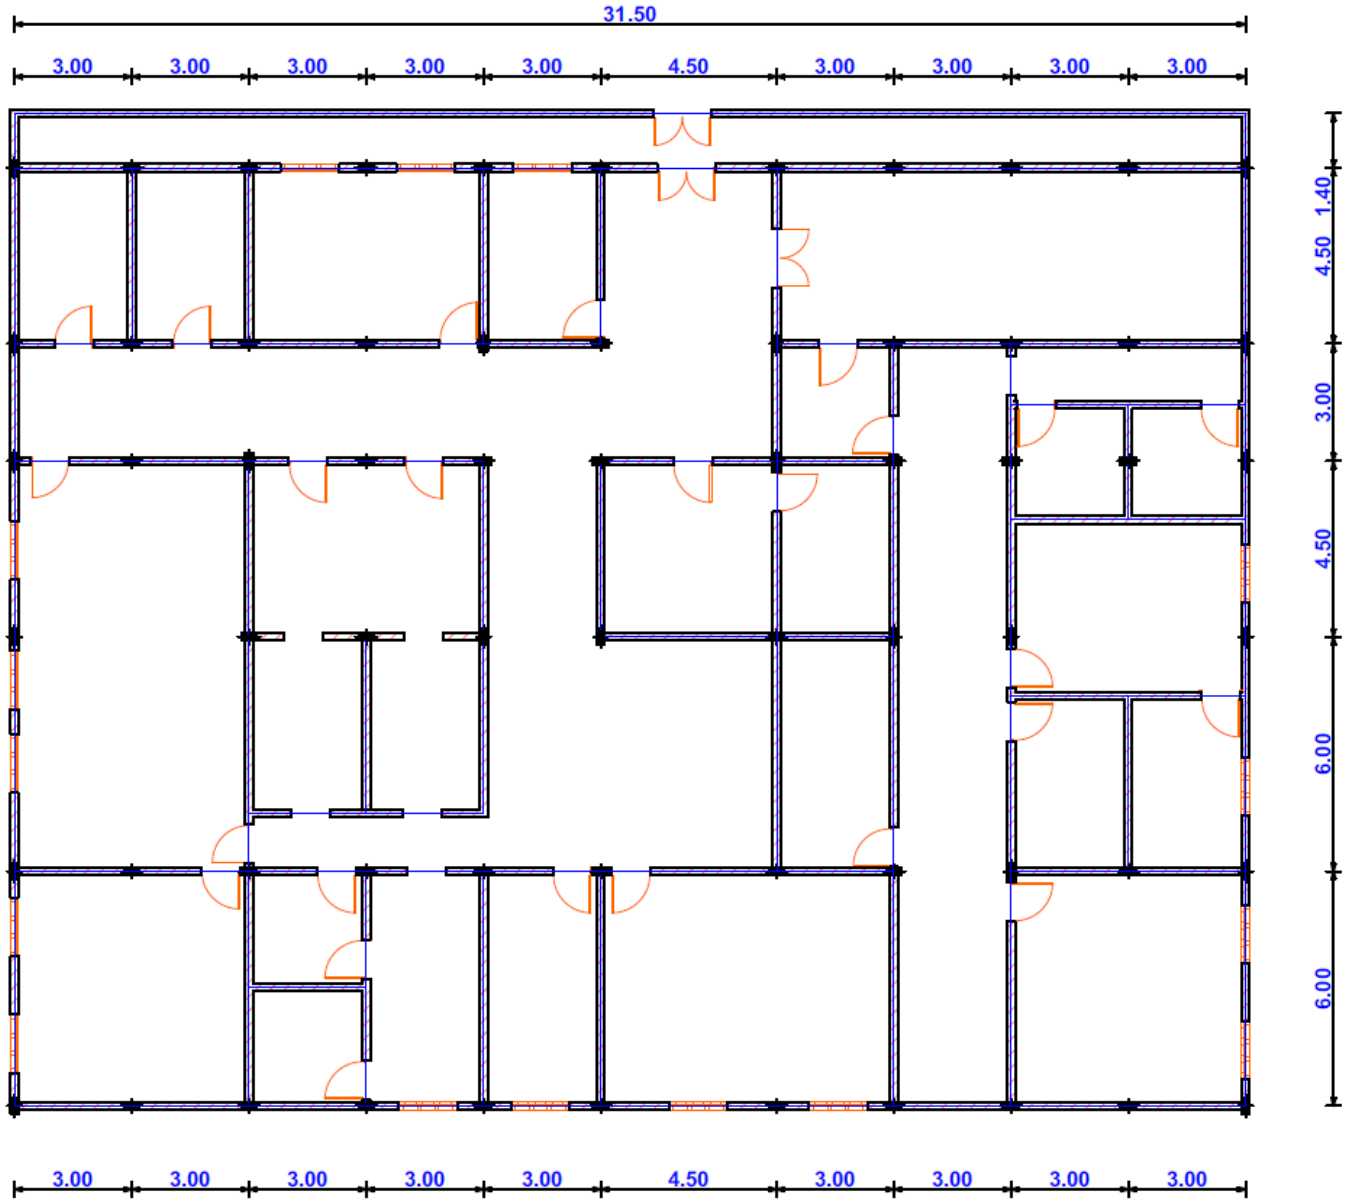

Floor Plan: Outpatient Block – Ground Floor:

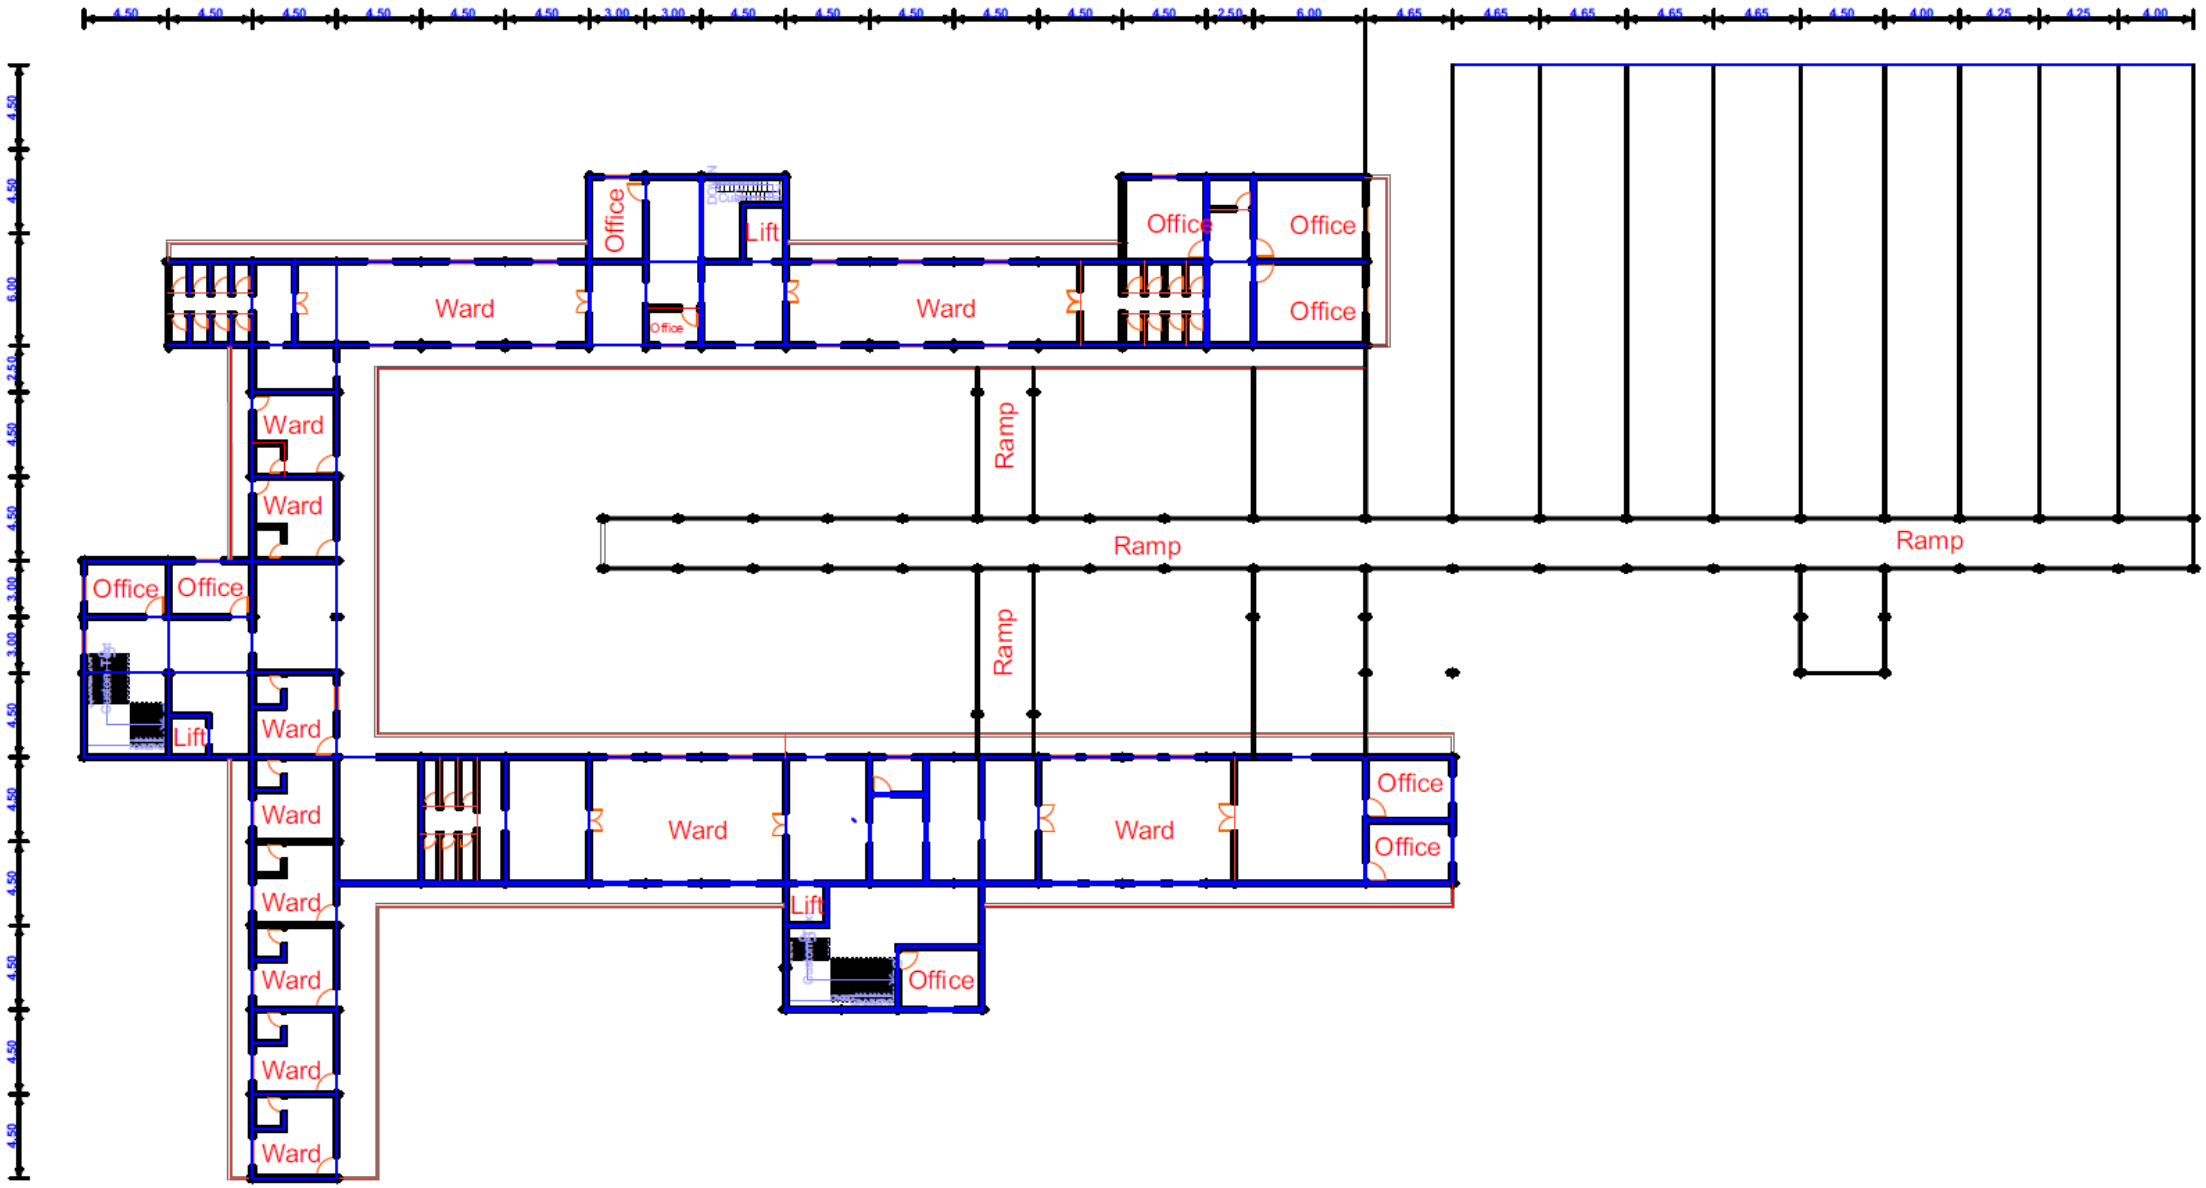

Floor Plan: Outpatient Block – 1st Floor:

Floor Plan: Surgical Block

Floor Plan: Inpatient Block - Ground, 1st & 2nd Floor (Same layout)

Proposed Specialties:

Below are the target specialties for the hospital:

- ✓ General Medicine / Internal Medicine
- ✓ General Surgery
- ✓ Obstetrics and Gynecology
- ✓ Emergency Medicine
- ✓ Trauma Center
- ✓ Orthopedics
- ✓ ENT (Ear, Nose, Throat)
- ✓ Ophthalmology
- ✓ Urology
- ✓ Radiology / Imaging (X-ray, Ultrasound & CT)
- ✓ Laboratory
- ✓ Psychiatry / Mental Health
- ✓ Dentistry / Oral Surgery

Project Scope:

We are looking for specialized healthcare consultancy for complete rehabilitation of the hospital, below are the main items of the scope of work:

1. Propose optimum capacity of the hospital in terms of number of beds for inpatient block, number of surgeries per day for surgical block and number of patients served per day for outpatient block.
2. Advise on the choice of specialties for the hospital considering local health needs and burden of disease.
3. Prepare BoQ (Bill of Quantities) for all medical equipment and furniture required to build the hospital based on the agreed specialties - for each specialty / department / function. (include cost estimates for reference)
4. Provide BoQ for diagnostic and support service requirements (labs, imaging, pharmacy, sterilization, blood bank etc).
5. Develop a comprehensive plan for hospital rehabilitation including upgrade to multi-specialty, devising step-by-step plan for rehabilitation works, including timelines and milestones.
6. Define phased implementation approach if needed (core vs advanced specialties)
7. Propose functional zoning of each block / floor and define optimal patient flow for each zone.
8. Advise on utility requirements (water, electricity, waste disposal, oxygen supply).
9. Recommend management structure for the hospital, staffing structure for each department including staff numbers and qualifications (doctors, nurses, technicians, support staff).
10. Prepare training and capacity building plans to develop local resources.
11. Identify gaps and priority areas for rehabilitation of the hospital.
12. Identify key risks to the project and provide mitigation strategies.
13. Ensure compliance with national health regulations and WHO / international standards where applicable.

Deliverables Roadmap:

Thank you
