Subject: FW: Revised RFQ 1279375146 Material for PEB shed for fuel & boiler
Importance: High

Dear Business Partners,

Please find the feedback on frequently asked questions. Please do let me know if any site visit is required for further clarity. Please ensure the submission of your proposal on time.

Shed for Fuel

- **Area:** 4,000 m²
- **Height:** 8 m
- **Periphery Brick Wall Height:** 3 m
- **Side Walls:** Sheet construction with a height of 5 m, ensuring compliance with fire safety clearance requirements.

Shed for Boiler

- **Area:** 1,000 m²
- **Height:** 16 m
- **Side Walls:** Sheet construction with a height of 8 m.

Design Considerations

1. **Incorporation of Zurich Report:** The design must integrate the inputs and recommendations outlined in the Zurich Report.
2. **Solar Panel Installation:** Provisions for solar panel installation should be included in the design to enhance sustainability.
3. **Fire Hydrant Action:**
    - Ensure that fire hydrants are strategically positioned to adequately cover both the biomass storage area and the boiler area. This will facilitate effective response from the on-site team and fire brigade in the event of a fire.
4. **Fire Separation Action:**
    - The boiler room, storage room, and control room must be physically separated from one another or constructed with fire-rated materials to prevent the spread of fire.
5. **Biomass Removal in Case of Fire:**
    - The biomass storage rooms should be equipped with sufficient openings to facilitate the removal of biomass in the event of a fire. This aspect must be verified in collaboration with the local fire brigade.

Responsibility
The design and Bill of Quantities (BOQ) will be the responsibility of the vendors.

Thank you for your attention to these critical details. Please ensure that all designs are compliant with the outlined specifications and safety measures.

Should you have any questions or require further clarification, feel free to reach out.

Regards,

Almas Ambreen
