User Requirement Specification (URS) for Plasma Collection Center Construction and Turnkey Project.xlsx (~18 KB) BOQ for Walkin Freezer.xlsx (~11 KB) Plasma Collection Process.jpeg (~95 KB) Layout Design.jpeg (~64 KB) Material, flow diagram.jpeg (~77 KB)

Dear Responsible,

I am writing on behalf of VitaPak Resources, a company dedicated to establishing high-standard plasma collection facilities in Pakistan. We are currently seeking quotations from qualified construction and engineering firms for the turnkey delivery of a new plasma collection center, designed to comply with PIC/S GMP guidelines, Pakistani regulatory standards (including DRAP), and international best practices.

The project entails the full scope of design, construction, fit-out, equipment installation, validation, and quality management system implementation to achieve an annual collection capacity of 30 metric tons of source plasma, with provisions for future expansion.
This initiative aims to ensure operational readiness for regulatory licensing and inspection.

To facilitate your preparation of a detailed quotation, I have attached the following documents for your review:

- User Requirement Specification (URS) for Plasma Collection Center Construction and Turnkey Project: This outlines the comprehensive requirements, including regulatory compliance, departmental layouts, equipment specifications, and validation protocols.
- BOQ for Walkin Freezer: A bill of quantities for walk-in freezers in capacities of 5,000 liters, 15,000 liters, 30,000 and 60,000 liters, aligned with the project's cold storage needs.
- Standard for Plasma Collection Center: This includes process flow diagrams, material/people flow layouts, and design standards to guide the facility's operational and architectural planning.
- The possible covered area is 6 Kanal for a purpose-built facility.

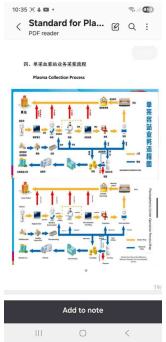

We invite your firm to submit a competitive quotation based on these specifications. Your proposal should include a breakdown of costs, a detailed timeline (preferably in Gantt chart format), evidence of prior experience with GMP-compliant facilities, and any
assumptions or clarifications required. Please also address how your approach meets the non-negotiable elements of GMP, QMS, and regulatory support as detailed in the URS.

Kindly provide your quotation by October 15, 2025, to allow sufficient time for evaluation. Should you require additional information or a site visit, please contact me directly at anila.sikandar@asiapakinvest.com or 03155551278.

We look forward to the possibility of collaborating on this important project and appreciate your prompt attention to this request.

Best regards, Anila Sikandar Chief Quality Officer VitaPak Resources
