PHARMACEUTICAL PLANT – ARCHITECTURAL DESIGN

1. What is the proposed site location (city, area)?
2. What is the total plot size (sq ft / sq m / acres)?
3. Is a soil investigation report available?
4. How much of the plot can be developed (ground coverage %)?
5. Maximum number of floors allowed?
6. What products will be manufactured?
7. Will the plant be single-product or multi-product?
8. What regulatory standards must be followed?
9. Number of production lines required.
10. List of manufacturing processes to be included.
11. Approximate area requirement for each process.
12. Major equipment sizes and layout constraints.
13. Any special containment or isolation requirements?
14. Raw material storage capacity required.
15. Loading and unloading dock requirements.
16. Type of QC laboratories required.
17. Sample receiving and retention areas.
18. Personnel movement flow requirements.
19. Material movement flow requirements.
20. Segregation between clean and non-clean areas.
21. Cleanroom classification required.
22. Temperature requirements for different areas.
23. HEPA filtration requirements.
